## PROJECT DESCRIPTIONS

### • Green Leaf Information Management System (Financial management) [MERN]

I am responsible for all incomes and expenses are handled through this system. All expenses and income are categorized in this system. This section should be able to read all the income details or the expense details of the other section. In this section net profit will be calculated through the system. Daily total expenses and income gain to the company will be shown in the system. A report of income and expenses should be generated. Should be able to search the income and the expense of a relevant date.

### • EasyShop Local ProductSelling Mobile App (Login Part) [KOTLIN]

Experienced app developer skilled in creating e-commerce mobile apps. Developed a robust login system allowing users to log in via email, phone number, and Google account. Ensured security through encryption and SMS verification. Improved user onboarding, engagement, and app performance. Committed to seamless user experiences and industry best practices.

### • Travelit Online Transport System (Admin Dashboard) [JAVA]

Admin dashboard for our transport system empowers administrators with user management capabilities. Through an intuitive interface, administrators can effortlessly add, edit, and delete user accounts. This efficient tool streamlines user management, enhancing the overall functionality and control of our transport system.

### • Health Hanger -Diet planning and Health Checkup [HTML,CSS,PHP]

Our web platform offers comprehensive diet planning and health checkup services. I am responsible for user registration, ensuring seamless admin login functionality, and providing the ability to edit admin login details.
